SUMMARY

Senior Technology Consultant with a strong background in architecting scalable SaaS platforms and AI-driven ecosystems. Expert in full-stack development, cloud-native infrastructure, and event-driven architectures, with a proven ability to bridge complex business requirements with robust, production-ready technical solutions. Focused on driving digital transformation through intelligent automation, modern system design, and high-performance application delivery.

TECHNICAL SKILLS

- Languages & Frameworks: TypeScript, JavaScript, Node.js, React.js, Next.js, Python, FastAPI
- Databases: MongoDB, DynamoDB, Qdrant
- Cloud & Infrastructure: AWS, GCP, Docker, Vercel
- AI & Systems: RAG, LLM Integration, Semantic Search, Event-Driven Architecture, SaaS Architecture

EXPERIENCE

Senior Information Technology Consultant — EY

Mumbai, India | Aug 2026 – Present

- Architected key components of the MahaIT E-Governance Platform, accelerating digital service delivery across state departments through scalable cloud microservices.
- Engineered the Admin Portal framework, streamlining application verification and reducing manual processing latency for state officials.
- Designed an Architecture to unify system-wide configuration data across disparate e-governance modules.
- Developed Git Operation Service to automate CI/CD repository workflows, driving significant improvements in system availability and operational throughput.

Senior Software Engineer — AppTestify

Pune, India | Feb 2026 – Aug 2026

- Architected QUASR+, a multi-tenant SaaS platform with hierarchical RBAC, data isolation, AWS infrastructure, Inngest orchestration, and Stripe billing.
- Designed reusable platform services for authentication, user provisioning, notifications, reporting, audit history, file management, internationalization, and AI-powered capabilities.
- Engineered AI-driven workflows and semantic search capabilities using OpenAI, Vercel AI SDK, vector databases, and event-driven processing.

Full-Stack Engineer — The Yarn Bazaar

Bengaluru, India | Sep 2023 – Aug 2025

- Built and maintained enterprise web, mobile, and internal platforms spanning CRM, vendor management, event operations, and customer-facing applications.
- Developed AI-powered automation workflows using LLMs, Qdrant, WhatsApp, and Slack to automate information processing, operational tasks, and real-time team workflows.
- Modernized core business systems, reducing CRM data entry by 70% and improving website page-load performance by 40% through a Next.js migration.

PROJECTS

AppTestify

QUASR+ — Enterprise SaaS Platform

- Architected a multi-tenant SaaS platform with account-scoped data isolation and six-level hierarchical RBAC across organizations, facilities, and departments.
- Implemented authentication and user provisioning using AWS Cognito, including invitations, onboarding, and role-based authorization.
- Built event-driven workflows using Inngest for notifications, scheduled jobs, AI processing, billing workflows, and asynchronous platform events.
- Integrated Stripe subscriptions, customer portals, plan-based feature access, and AI credit management.
- Developed reusable platform services for reporting, audit history, internationalization, file management, notifications, dashboard customization, and AI-powered semantic search.

The Yarn Bazaar

Bandhu — AI & Operations Platform

- Built a three-sided platform connecting buyers, vendors, and internal operations teams through mobile, web, messaging, and real-time workflows.
- Developed buyer-facing features including real-time product pricing, industry events, news, podcasts, blogs, and a textile calculator.
- Built a WhatsApp-to-database pipeline where vendor price updates are parsed by an LLM, structured, and queued for team approval.
- Developed centralized vendor, venue, event, and client management with role-based access and live webpage previews.
- Integrated Slack workflows with real-time notifications, allowing internal teams to approve, modify, or trigger operational actions through AI prompts.

The Yarn Bazaar CRM — CRM & Automation Platform

- Built a centralized CRM for lead management, customer visibility, communication, and order tracking across internal sales workflows.
- Integrated WhatsApp, email, and call automation to provide real-time alerts and streamline lead follow-up.
- Integrated Google Maps for customer location tagging, visit planning, and sales-team coordination.
- Implemented OCR pipelines to extract structured information from invoices and forms, reducing manual data entry by 70%.
- Built the platform using React, TypeScript, DynamoDB, AWS Lambda, API Gateway, Cognito, S3, and CloudFront.

The Yarn Bazaar Website — Next.js Platform

- Led the migration of the company's static website to Next.js, modernizing its architecture with a focus on performance, SEO, and content management.
- Built a self-service CMS allowing the marketing team to manage blogs, news, and podcasts without developer intervention.
- Leveraged Next.js SSR and caching to improve page-load performance by 40%.
- Reduced developer dependency for routine content updates by 70% through the CMS.
- Built and deployed the platform using Next.js, TypeScript, DynamoDB, AWS Lambda, API Gateway, Cognito, S3, and CloudFront.

Event Reach — Multi-Channel Communication Platform

- Built an internal multi-event communication platform for managing event-specific guest lists, templates, sender identities, and communication settings.
- Implemented automated Email and WhatsApp invitation workflows using SMTP/SES and WhatsApp Web.js.
- Developed automated reminders and follow-up workflows with guest response and communication status tracking.
- Designed asynchronous messaging workflows supporting scheduled and event-triggered communications.
- Centralized guest outreach across multiple events to reduce manual communication overhead.

EDUCATION

Lovely Professional University — Punjab, India

B.Tech in Electrical & Electronics Engineering | Aug 2018 – May 2022

Masai School — Bengaluru, India

Full-Stack Web Development | Jun 2022 – Aug 2023
